

Pellucid Marginal Degeneration

Patient: Kyle Male Age: 17 years

Pellucid Marginal Degeneration

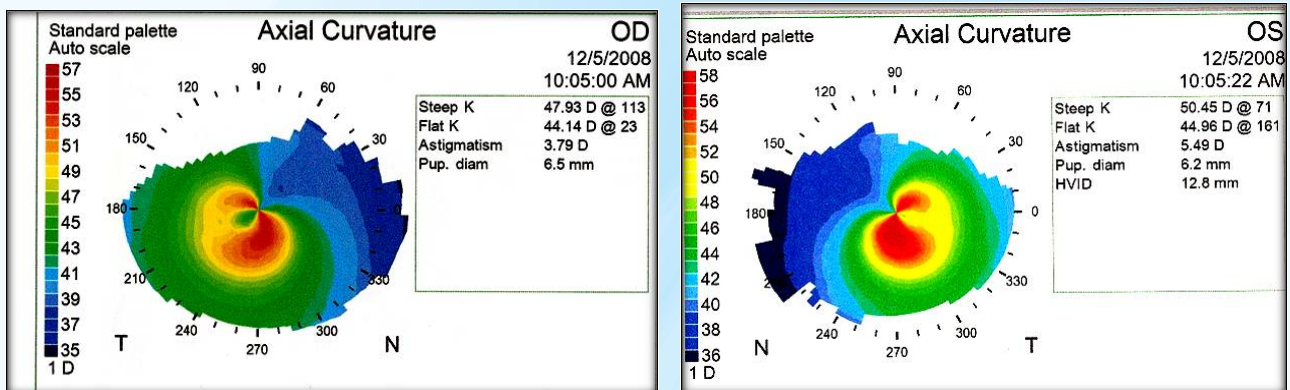

History: Kyle is a 17 year old male who has Pellucid Marginal Degeneration. Kyle is very active and has useable but distorted visual acuity (VA) without contact lenses.

Kyle had adaptive issues with GP lenses and questioned the discomfort / benefit ratio of wearing lenses. Attempts at fitting soft toric and smaller diameter GP lenses were unsuccessful due to VA and comfort problems.

Vision:	R: 20/60 PH 20/25	L: 20/70 PH 20/30
Spectacle RX:	R: OD pl-1.75 X 053 20/25-	L: +0.50-1.50X123 OS 20/30-
Keratometry:	R: 44.25/50.00@035 3+ dist	L: 43.00/51.50@145 3+ dist

Large Diameter GP lenses were discussed due to Kyle's active lifestyle. The large diameter should reduce the chances of the lenses becoming dislodged or displaced during sporting activity. Large diameter lenses should also enhance centration and overall comfort. After diagnostic fitting, Kyle lenses were ordered.

TOPOGRAPHY OU

Lens Type Fitted

Kyle's final contact lens prescription was as follows:

Optimum Extra™ material by Contamac.

OD 7.80/-2.75/11.3 20/20-

OS 7.65/-3.50/11.3 20/20-

Kyle agreed to go through the adaptation process and now reports good comfort and excellent VA with his Large Diameter GP lenses, and wears them for most of his waking hours.
